

Done! I've created a **Version 3 balanced preset** with a much smoother gameplay progression instead of simply increasing numbers.

 **Download**

[cell-defense-level-presets-balanced-v3.json](#)

What's improved

The balance pass focuses on creating a more natural progression across the five levels:

Level	Main Challenge	Key Changes
Level 1	Learn the mechanics	Kept as the baseline.
Level 2	Hidden threats	Slightly lower player HP, stronger hidden cancer, faster pressure, more attackers.
Level 3	Rapid mutation	Faster cancer spread, tougher hidden cancer, reduced recovery time.
Level 4	Protect healthy cells	Stronger cancer attacks on healthy cells, healthier allies to create tactical decisions, faster spread.
Level 5	Full assault	Strongest cancer, highest DPS, fastest mutation, dragging disabled, increased simultaneous pressure.

Balance philosophy used

Rather than only increasing HP each level, the progression now increases difficulty through multiple dimensions:

-  Growth pressure (split timing and mutation)
-  Combat pressure (HP and DPS)
-  Survival pressure (player health and damage interval)
-  Strategic complexity (healthy cell attacks, hidden cancer, simultaneous attackers)

This should produce a noticeably smoother increase in challenge than the original presets while keeping the mechanics recognizable.
